

ATHLETE COMBINE PERFORMANCE REPORT

Field testing summary compared with Forge Coach Handbook (2019) benchmarks

Ben Kowalski	ID: FPL-2455	Age 19 · Male
Sport: Football (college)	Tested: 2026-07-15	Northgate Performance Center

Administered by D. Osei · Conditions: standard testing environment

Performance Overview

Ben Kowalski completed the combine battery on 2026-07-15. Results are compared with the typical range for male athletes aged 18–29 (Forge Coach Handbook 2019, Appendix C). Scores rated **Below** typical: Sit-and-Reach, Single-Leg Balance (L). These ranges describe common recreational-to-competitive performance bands, not elite standards. Interpretation always considers the athlete’s sport, training history, and any testing notes.

Detailed Results vs. Benchmarks

Test	Result	Typical Range (18–29)	Rating	Interpretation
40 m Sprint	4.98 s	4.6 – 5.5 s	Typical	Within typical range
Vertical Jump	63.0 cm	44 – 64 cm	Typical	Within typical range
Broad Jump	251 cm	205 – 260 cm	Typical	Within typical range
Grip Strength (L)	54.0 kg	39 – 56 kg	Typical	Within typical range
Grip Strength (R)	55.5 kg	39 – 56 kg	Typical	Within typical range
Isometric Mid-Thigh Pull	3,050 N	—	Recorded	No handbook benchmark available
Sit-and-Reach	-4.0 cm	-2 – 14 cm	Below	Below typical range
Single-Leg Balance (L)	14.0 s	16 – 40 s	Below	Below typical range
Single-Leg Balance (R)	16.0 s	16 – 40 s	Typical	Within typical range

Note: Mid-thigh pull (isometric force) is not covered in the 2019 handbook; the recorded value is provided for longitudinal tracking. Lower time is better for the 40 m sprint; higher values are better for all other scored tests.

Key Takeaways

Areas below typical. Sit-and-Reach, Single-Leg Balance (L) sit outside the typical band in the unfavorable direction and warrant attention in the next training block.

Coaching Recommendations

- **Context for college football.** The battery highlights acceleration, lower-body power, and upper-body strength—qualities that transfer to first-step quickness, blocking/tackling power, and play-making athleticism. Ben’s profile should be interpreted against the demands of the specific position.
- **Build foundational speed and power.** No test currently exceeds the typical band. A focused block of acceleration work and low-dose plyometrics will raise the ceiling for sport-specific actions.
- **Single-leg control.** Balance scores fall below the typical range. Include single-leg strength, landing, and perturbation work 2× per week to reduce injury risk and improve force transfer.
- **Mobility.** Sit-and-reach is below typical. Targeted hip-flexor and hamstring mobility, plus end-range strength, will support better sprint mechanics and reduce soft-tissue risk.
- **Position-relevant power.** Emphasize horizontal force (broad-jump quality, resisted accelerations) and reactive strength. Include change-of-direction and deceleration work once linear power is stable.
- **Retest cadence.** Repeat the full battery (or the completed subset) after an 8–12 week focused block. Track the mid-thigh pull longitudinally even though it lacks a published typical range.

This report is intended for coaching and athlete development use. Benchmarks are drawn from the Forge Coach Handbook (2019 edition), Appendix C, and represent typical ranges for recreational-to-competitive adult athletes—not elite or sport-specific norms. Individual context (training history, recent fatigue, technical factors, injury status) should always inform interpretation.
