

# ATHLETE COMBINE PERFORMANCE REPORT

Field testing summary compared with Forge Coach Handbook (2019) benchmarks

|                             |                    |                     |
|-----------------------------|--------------------|---------------------|
| Casey Morgan                | ID: FPL-2145       | Age 39 · Female     |
| Sport: Recreational running | Tested: 2026-07-17 | Ridgeline Athletics |

Administered by M. Sandoval · Conditions: Athlete recovering from a left ankle sprain (6 weeks ago).

## Performance Overview

Casey Morgan completed the combine battery on 2026-07-17. Results are compared with the typical range for female athletes aged 30–39 (Forge Coach Handbook 2019, Appendix C). Skipped tests: Vertical Jump, Broad Jump. These ranges describe common recreational-to-competitive performance bands, not elite standards. Interpretation always considers the athlete’s sport, training history, and any testing notes.

## Detailed Results vs. Benchmarks

| Test                     | Result  | Typical Range (30–39) | Rating   | Interpretation                                                        |
|--------------------------|---------|-----------------------|----------|-----------------------------------------------------------------------|
| 40 m Sprint              | 6.02 s  | 5.4 – 6.4 s           | Typical  | Within typical range                                                  |
| Vertical Jump            | —       | —                     | Skipped  | Jumping tests skipped per athlete request (recent left ankle sprain). |
| Broad Jump               | —       | —                     | Skipped  | See vertical jump.                                                    |
| Grip Strength (L)        | 30.0 kg | 25 – 37 kg            | Typical  | Within typical range                                                  |
| Grip Strength (R)        | 31.0 kg | 25 – 37 kg            | Typical  | Within typical range                                                  |
| Isometric Mid-Thigh Pull | 1,750 N | —                     | Recorded | No handbook benchmark available                                       |
| Sit-and-Reach            | 14.0 cm | 1 – 17 cm             | Typical  | Within typical range                                                  |
| Single-Leg Balance (L)   | 26.0 s  | 16 – 40 s             | Typical  | Within typical range                                                  |
| Single-Leg Balance (R)   | 24.0 s  | 16 – 40 s             | Typical  | Within typical range                                                  |

Note: Mid-thigh pull (isometric force) is not covered in the 2019 handbook; the recorded value is provided for longitudinal tracking. Lower time is better for the 40 m sprint; higher values are better for all other scored tests.

## Key Takeaways

**Incomplete battery.** Jump tests were not performed. Results should be interpreted with that limitation in mind; re-testing once cleared will give a fuller power profile.

## Coaching Recommendations

- **Context for running.** While pure sprint and jump numbers are less critical for distance or recreational running, they still inform stiffness, force capacity, and injury-risk profile. Mobility and single-leg control are higher priorities.
- **Build foundational speed and power.** No test currently exceeds the typical band. A focused block of acceleration work and low-dose plyometrics will raise the ceiling for sport-specific actions.
- **Respect current limitations.** Jump tests were skipped due to recent injury history. Prioritize graded return-to-jump progressions and ankle stability before maximal testing or high-volume plyometrics.
- **Running economy supports.** Focus on hip extension strength, calf/Achilles capacity, and single-leg control rather than maximal jump height. Recheck mobility and balance after any increase in mileage.
- **Retest cadence.** Repeat the full battery (or the completed subset) after an 8–12 week focused block. Track the mid-thigh pull longitudinally even though it lacks a published typical range.

This report is intended for coaching and athlete development use. Benchmarks are drawn from the Forge Coach Handbook (2019 edition), Appendix C, and represent typical ranges for recreational-to-competitive adult athletes—not elite or sport-specific norms. Individual context (training history, recent fatigue, technical factors, injury status) should always inform interpretation.
