

ATHLETE COMBINE PERFORMANCE REPORT

Field testing summary compared with Forge Coach Handbook (2019) benchmarks

Maya Castillo	ID: FPL-2410	Age 24 · Female
Sport: Volleyball (club)	Tested: 2026-07-14	Northgate Performance Center

Administered by D. Osei · Conditions: standard testing environment

Performance Overview

Maya Castillo completed the combine battery on 2026-07-14. Results are compared with the typical range for female athletes aged 18–29 (Forge Coach Handbook 2019, Appendix C). These ranges describe common recreational-to-competitive performance bands, not elite standards. Interpretation always considers the athlete's sport, training history, and any testing notes.

Detailed Results vs. Benchmarks

Test	Result	Typical Range (18–29)	Rating	Interpretation
40 m Sprint	5.58 s	5.3 – 6.3 s	Typical	Within typical range
Vertical Jump	46.0 cm	31 – 47 cm	Typical	Within typical range
Broad Jump	192 cm	160 – 205 cm	Typical	Within typical range
Grip Strength (L)	31.5 kg	25 – 36 kg	Typical	Within typical range
Grip Strength (R)	32.0 kg	25 – 36 kg	Typical	Within typical range
Isometric Mid-Thigh Pull	1,850 N	—	Recorded	No handbook benchmark available
Sit-and-Reach	12.0 cm	2 – 18 cm	Typical	Within typical range
Single-Leg Balance (L)	33.0 s	18 – 42 s	Typical	Within typical range
Single-Leg Balance (R)	36.0 s	18 – 42 s	Typical	Within typical range

Note: Mid-thigh pull (isometric force) is not covered in the 2019 handbook; the recorded value is provided for longitudinal tracking. Lower time is better for the 40 m sprint; higher values are better for all other scored tests.

Key Takeaways

Solid overall profile. Most scores fall inside the typical band with no major red flags. The mid-thigh pull provides a useful force baseline for future comparison.

Coaching Recommendations

- **Context for volleyball.** Approach jump power, lateral movement, and upper-body durability are central. The vertical and broad jump results are the most sport-specific markers in this battery.
- **Build foundational speed and power.** No test currently exceeds the typical band. A focused block of acceleration work and low-dose plyometrics will raise the ceiling for sport-specific actions.
- **Jump and approach quality.** Progress approach jumps, depth-jump variations, and single-leg take-off work while monitoring landing mechanics, especially if any prior ankle history exists.
- **Retest cadence.** Repeat the full battery (or the completed subset) after an 8–12 week focused block. Track the mid-thigh pull longitudinally even though it lacks a published typical range.

This report is intended for coaching and athlete development use. Benchmarks are drawn from the Forge Coach Handbook (2019 edition), Appendix C, and represent typical ranges for recreational-to-competitive adult athletes—not elite or sport-specific norms. Individual context (training history, recent fatigue, technical factors, injury status) should always inform interpretation.
