

ATHLETE COMBINE PERFORMANCE REPORT

Field testing summary compared with Forge Coach Handbook (2019) benchmarks

Priya Raman	ID: FPL-2233	Age 33 · Female
Sport: Tennis (competitive)	Tested: 2026-07-15	Northgate Performance Center

Administered by D. Osei · Conditions: standard testing environment

Performance Overview

Priya Raman completed the combine battery on 2026-07-15. Results are compared with the typical range for female athletes aged 30–39 (Forge Coach Handbook 2019, Appendix C). Scores rated **Superior** (better than the typical band): Single-Leg Balance (R). These ranges describe common recreational-to-competitive performance bands, not elite standards. Interpretation always considers the athlete’s sport, training history, and any testing notes.

Detailed Results vs. Benchmarks

Test	Result	Typical Range (30–39)	Rating	Interpretation
40 m Sprint	5.92 s	5.4 – 6.4 s	Typical	Within typical range
Vertical Jump	37.0 cm	29 – 45 cm	Typical	Within typical range
Broad Jump	176 cm	155 – 200 cm	Typical	Within typical range
Grip Strength (L)	33.0 kg	25 – 37 kg	Typical	Within typical range
Grip Strength (R)	35.0 kg	25 – 37 kg	Typical	Within typical range
Isometric Mid-Thigh Pull	1,820 N	—	Recorded	No handbook benchmark available
Sit-and-Reach	17.0 cm	1 – 17 cm	Typical	Within typical range
Single-Leg Balance (L)	39.0 s	16 – 40 s	Typical	Within typical range
Single-Leg Balance (R)	41.0 s	16 – 40 s	Superior	Above typical range

Note: Mid-thigh pull (isometric force) is not covered in the 2019 handbook; the recorded value is provided for longitudinal tracking. Lower time is better for the 40 m sprint; higher values are better for all other scored tests.

Key Takeaways

Standout qualities. Single-Leg Balance (R) exceed the typical range for age and sex. These are the clearest physical assets relative to the recreational-to-competitive peer group.

Coaching Recommendations

- **Context for competitive tennis.** Lateral quickness, rotational power proxies, grip strength, and single-leg stability all contribute to court coverage and stroke durability.
- **Protect and progress current strengths.** Single-Leg Balance (R) sit above the typical band for age/sex. Continue quality speed and/or power work with adequate recovery so these qualities remain assets rather than being eroded by high-volume general training.
- **Lateral and rotational durability.** Prioritize single-leg stability, hip mobility, and rotational medicine-ball work. Grip strength is already solid—maintain it inside regular strength sessions.
- **Retest cadence.** Repeat the full battery (or the completed subset) after an 8–12 week focused block. Track the mid-thigh pull longitudinally even though it lacks a published typical range.

This report is intended for coaching and athlete development use. Benchmarks are drawn from the Forge Coach Handbook (2019 edition), Appendix C, and represent typical ranges for recreational-to-competitive adult athletes—not elite or sport-specific norms. Individual context (training history, recent fatigue, technical factors, injury status) should always inform interpretation.
