

ATHLETE COMBINE PERFORMANCE REPORT

Field testing summary compared with Forge Coach Handbook (2019) benchmarks

Sam Rivera	ID: FPL-2401	Age 22 · Male
Sport: Basketball (college)	Tested: 2026-07-15	Northgate Performance Center

Administered by D. Osei · Conditions: Busy session, two athletes tested in parallel.

Performance Overview

Sam Rivera completed the combine battery on 2026-07-15. Results are compared with the typical range for male athletes aged 18–29 (Forge Coach Handbook 2019, Appendix C). Scores rated **Superior** (better than the typical band): 40 m Sprint, Vertical Jump, Broad Jump, Grip Strength (R). These ranges describe common recreational-to-competitive performance bands, not elite standards. Interpretation always considers the athlete's sport, training history, and any testing notes.

Detailed Results vs. Benchmarks

Test	Result	Typical Range (18–29)	Rating	Interpretation
40 m Sprint	3.92 s	4.6 – 5.5 s	Superior	Faster than typical range (lower time is better)
Vertical Jump	68.0 cm	44 – 64 cm	Superior	Above typical range
Broad Jump	262 cm	205 – 260 cm	Superior	Above typical range
Grip Strength (L)	55.0 kg	39 – 56 kg	Typical	Within typical range
Grip Strength (R)	57.0 kg	39 – 56 kg	Superior	Above typical range
Isometric Mid-Thigh Pull	3,100 N	—	Recorded	No handbook benchmark available
Sit-and-Reach	2.0 cm	-2 – 14 cm	Typical	Within typical range (Athlete rushed through trial, appeared distracted.)
Single-Leg Balance (L)	21.0 s	16 – 40 s	Typical	Within typical range
Single-Leg Balance (R)	19.0 s	16 – 40 s	Typical	Within typical range

Note: Mid-thigh pull (isometric force) is not covered in the 2019 handbook; the recorded value is provided for longitudinal tracking. Lower time is better for the 40 m sprint; higher values are better for all other scored tests.

Key Takeaways

Standout qualities. 40 m Sprint, Vertical Jump, Broad Jump, Grip Strength (R) exceed the typical range for age and sex. These are the clearest physical assets relative to the recreational-to-competitive peer group.

Coaching Recommendations

- **Context for basketball.** Vertical and horizontal power, first-step speed, and single-leg stability are highly relevant to rebounding, finishing, and defensive slides. Grip is secondary but useful for ball security.
- **Protect and progress current strengths.** 40 m Sprint, Vertical Jump, Broad Jump sit above the typical band for age/sex. Continue quality speed and/or power work with adequate recovery so these qualities remain assets rather than being eroded by high-volume general training.
- **Position-relevant power.** Emphasize horizontal force (broad-jump quality, resisted accelerations) and reactive strength. Include change-of-direction and deceleration work once linear power is stable.
- **Retest cadence.** Repeat the full battery (or the completed subset) after an 8–12 week focused block. Track the mid-thigh pull longitudinally even though it lacks a published typical range.

This report is intended for coaching and athlete development use. Benchmarks are drawn from the Forge Coach Handbook (2019 edition), Appendix C, and represent typical ranges for recreational-to-competitive adult athletes—not elite or sport-specific norms. Individual context (training history, recent fatigue, technical factors, injury status) should always inform interpretation.
